### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cuevas (5,902,010) in view of Cech, et al. (5,957,491).

Cuevas teaches an elastomeric bladder in a vehicle seat comprising a plurality of elastomeric tethers coupling the walls of the bladder wherein the tethers restrict separation of the walls but collapse when the occupant loading reduces the separation between the walls. The elastomeric tethers is in the form of a strip of elastomeric material wherein a first end of the strip is affixed to an upper wall of the bladder and a second end of the strip is affixed to a lower wall of the bladder. The tethers are arranged in a uniform geometric pattern, as shown in figure 2. The tethers are arranged in a non-uniform pattern, as shown in figure 3.

Cuevas teaches the claimed invention except for the bladder being made of sheets welded at the peripheral. Cech teaches a seat bladder having sheets 602, 604 welded at the peripheral 602. Based on the teachings of Cech, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the bladder of Cuevas to be made of sheets to provide comfort.
